EDUCATION

2021 - 2025

UNIVERSITY OF NORTH
CAROLINA - CHARLOTTE

- Bachelor of Computer Science
- Deans List - Spring 2022
- Relevant Coursework:
 - Data Structures
 - Logic and Algorithms
 - Intelligent Robotics
 - Natural Language Processing
 - Machine Learning
 - Calculus I and II
 - Linear Algebra

SKILLS

Programming Languages

- Python
- JavaScript
- Java
- C

Libraries & Frameworks

- ReactJS
- OpenAI
- ROS2
- Pandas
- NumPy
- SpaCy
- Streamlit

Soft Skills

- Problem-solving
- Communication
- Teamwork

CAREER GOALS AND OBJECTIVES

Make a long-lasting difference in the IT community as a Software Engineer through building innovative software solutions to real-world problems

SIDE PROJECTS

Recipe.AI

APR 2025

ReactJS | JavaScript | OpenAI | Python | Flask |

- Developed a Full-Stack React Application with AI-pipeline backend
- Flask backend retrieval of user-submitted form data
- Efficiently creates a recipe dependent on :
 - Type of dish (salty, sweet, savory, etc.)
 - Time of Day (Breakfast, Lunch, or Dinner)
 - Allergies present in the user
- Implemented error-handling to ensure seamless experience
- Utilized LocalStorage to ensure data-recovery upon leaving the page

AI-Powered Timecard System

MAR 2025

Facial Recognition | Streamlit | Python | OpenCV | Database Management | SQLite

- Developed a Full-Stack Streamlit-based timecard system with login/signup authentication.
- Integrated facial recognition for secure clock-in/out verification using OpenCV.
- Designed a schedule management feature supporting CSV uploads and manual input.
- Built a user database to store names, hashed passwords, and facial images.
- Built a shifts database to store the names, shift date, start time, and end time.
- Ensured data security by verifying user identity before logging attendance.

Python File Organizer Script

- Built a simple, yet efficient tool that organizes a client's download directory into subcategories based on file extension.
